

## **IsraSpeech: A Corpus of Israeli Knesset Plenary Speeches**

Mor-Lan, G. and Shenhav, S.R.

We introduce IsraeSpeech, a novel dataset of Knesset plenary speeches held during 1992-2022 in the Hebrew language. IsraSpeech is heavily processed from officially released Word document versions of plenary sessions that have been carefully converted into a convenient machine readable format and enriched with metadata. Upon publication of an introduction article IsraSpeech will be openly accessible to the research community at large in order to enable and promote computational text analyses focusing on Israel, or including Israel in a comparative perspective, as well as any other research into political speech in Hebrew.
